                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to murine oligonucleotides (ACC62754-ACC68806), which are associated with tumour suppression, tumour reversion, apoptosis and virus resistance. The oligonucleotides are useful as (1) as probes and primers for detecting, identifying, quantifying and/or amplifying nucleic acid, e.g. as one component of a gene chip; in vitro as (anti)sense reagents; and (2) for production of recombinant polypeptides. The oligonucleotides are useful for preparation of pharmaceuticals for prevention and/or treatment of viral diseases that are characterised by development of tumours or cell degeneration, specifically cancer but also Alzheimer's disease and schizophrenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid, useful for treating viral diseases associated with tumors and cell degeneration, also related polypeptides, antibodies and transfected cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      viral disease; tumour; cell degeneration; cancer; Alzheimer's disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             17-SEP-2001; 2001FR-00011979

The nucleotides are used as probes or primers for detecting, identifying, quantifying and/or amplifying nucleic acids, as in vitro sense and antisense sequences, of nucleotides involved in tumour suppression or reversion, apoptosis and or viral resistance, to produce recombinant polypeptides, and to prepare transgenic animals, as calls containing the vectors, the encoded polypeptides and antibodies (also vectors containing them and cells containing the polypeptide are useful for prevention and/or treatment of viral infections or diseases characterized by development of tumours or cell degeneration (e.g. Alzheimer's disease or schizophrenia).

Analysis of the expression of the nucleotides can be used for diagnosis of the polypeptide are useful for prevention and/or prognosis of these diseases. The nucleotides and polypeptides can be used to screen for their specific interactive molecules, containly useful for treating diseases associated with abnormal contains of the nucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

polypeptide
                                                                                                                                                                                                       nucleotides, a sequence that hybridizes under stringent conditions with the nucleotides, or the complement, or corresponding RNA, of the nucleotides. The nucleotides are used as probes or primers for detecting identifying, quantifying and/or amplifying nucleic acids, as in vitro sense and antisense sequences, of nucleotides involved in tumour suppression or reversion, apoptosis and or viral resistance, to produce recombinant polypeptides, and to prepare transgenic animals, as experimental models. The nucleotides (also vectors containing them and cells containing the vectors), the encoded polypeptides and antibodies (Ab) against the polypeptide are useful for prevention and/or treatment of viral infections or diseases characterized by development of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to the isolation of 6327 nucleotide sequences, fragments of at least 15 consecutive nucleotides of these nucleotides, a sequence having at least 80% identity, after optimal alignment, with the nucleotides, a sequence that hybridizes under stringer and it is not the nucleotides, as sequence that hybridizes under stringer and its nucleotides.
                                             or cell degeneration (e.g. Alzheimer's disease or schizophrenia).
Analysis of the expression of the nucleotides can be used for diagnosis and/or prognosis of these diseases. The nucleotides and polypeptides can also be used to screen for their specific interactive molecules, potentially useful for treating diseases associated with abnormal expression of the nucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid encoding human prostate membrane-specific antigen, useful e.g. for treatment of tumors and viral infection, also related

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 2342
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 in the phenomena of tumour suppression, tumour reversion, apoptosis and/or resistance to viruses. The invention may be useful for the development of compounds with a cytostatic, virucide, neuroprotective, nootropic or neuroleptic activity. The DNA sequences may be useful as probes and primers for detecting, indentifying, quantifying and/or amplifying nucleic acid, for example as one component of a gene chip, in vitro as antisense reagents and for production of recombinant convitro as antisense reagents and for production of recombinant convitro as antisense reagents and for production of recombinant convitro as antisense reagents and for production of recombinant convitro as antisense reagents and for production of recombinant convitro as antisense revelopment of treatment of viral diseases that comparation and/or treatment of viral diseases that care characterised by development of tumours or cell degeneration. The greenst sequence is that of a nucleic acid sequence of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at figure and supplies and supplies and the printed specification, but was obtained in electronic format directly from WIPO at figure and supplies and supplies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      development of compounds with a cytostatic, virucide, neuroprotective, nootropic or neuroleptic activity. The DNA sequences may be useful as probes and primers for detecting, indentifying, quantifying and/or amplifying nucleic acid, for example as one component of a gene chip, in vitro as antisense reagents and for production of recombinant polypeptides. The invention may therefore be useful for preparation of pharmaceuticals for prevention and/or treatment of viral diseases that are characterised by development of tumours or cell degeneration, specifically cancer but also Alzheimer's disease and schizophrenia. The present sequence is that of a nucleic acid sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/publishedpct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 prostaglandin D2 receptor; PTGDR, IkappaB kinase; IKK; protein kinase PKR; cerebrovascular accident; protein kinase PKR; cerebrovascular accident; central nervous system injury; CNS injury; spinal cord injury; cance; melanoma; lymphoma; glioma; inflammatory disease; rheumatoid arthrit; restenosis; asthma; Crohn's disease; diabetes; obesity; autoimmune disease; lupus; multiple sclerosis; transplant rejection; schaemia; reperfusion; glomerulonephritis; sepsis; allergy; asthma; allergic rhinitis; atopic dermatitis; human PKR;

Novel enzymatic nucleic acid that down-regulates expression of neurite growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase of protein kinase PKR genes, for treating cancer and inflammatory disease

disease.

or

invention comprises nucleic acids (e.g. antisense oligonucleotides) t down regulate the expression or inhibit the function of a receptor a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR)

Claim 59;

The nucleic acids of the invention are useful for treating: cerebrovascular accident, central nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma, lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis, restences or asthma), Crohn's disease, diabetes, obesity, autoimmune disease, lupus, multiple sclerosis, transplant/graft rejection, ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The nucleic acids of the invention are also useful for down-regulating the expression of a target gene and as a diagnostic tool to examine genetic drifts and mutations within diseased cells or to detect the presence of a target RNA in a cell. The present RNA sequence represents a human PKR enterests.
                                                                                                      Novel enzymatic nucleic acid that down-regulates expression of neurite growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or protein kinase PKR genes, for treating cancer and inflammatory disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antisense oligonucleotide; neurite growth inhibitor; NOGO; prostaglandin D2 receptor; PTGDR; IkappaB kinase; IKK; protein kinase PKR; cerebrovascular accident; central nervous system injury; CNS injury; spinal cord injury; cancer; melanoma; lymphoma; glioma; inflammatory disease; rheumatoid arthritis; restenosis; asthma; Crohn's disease; disease; rheumatoid; rejection; autolmmune disease; lupus; multiple sclerosis; transplant rejection; graft rejection; ischaemia; reperfusion; glomerulonephritis; sepsis; allergy; asthma; allergic rhinitis; atopic dermatitis; human PKR; substrate; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 17

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the invention are useful for treating: cerebrovascular accident, central nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma, lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis, restenosis or asthma), Crohn's disease, disetes, obesity, autoimmune disease, lupus, multiple sclerosis, transplant/graft rejection, ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The mucleic acids of the invention are also useful for down-regulating the expression of a target gene and as a diagnostic tool to examine genetic drifts and mutations within diseased cells or to detect the presence of target RNA in a cell. The present RNA sequence represents a human PKR
                              The present invention relates to a method of identifying RNA ligands that bind to a target molecule, comprising treating a first pool of RNA ligands that collectively bind more than one target under conditions effective to reduce the concentration or eliminate the presence of one or more predominate target-binding RNA ligands from the first pool of RNA ligands. In particular, the method can be used to identify RNA aptamers capable of binding to heat shock factor protein. The present sequence is a DNA sequence shown in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 17 BP; 4 A; 2 C; 7
                                                                                                                                                                                          Disclosure; Page 65;
                                                                                                                                                                                                                                           Identifying RNA ligands that bind to a target molecule comprises treating a first pool of RNA ligands that collectively bind more than one target to reduce the concentration or eliminate the presence of target-binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            31-DEC-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Synthetic

                                                                                                                                                                                                                                                                                                  The invention relates to a novel method for identifying a subject at risk of breast cancer which comprises detecting the presence or absence of one or more polymorphic variations associated with breast cancer in a nucleic acid sample from a subject. The method of the invention has cytostatic applications and may be useful for identifying a risk of breast cancer, as well as therapeutic and prophylactic treatments that specifically target breast cancer, such as gene therapy. The current sequence is that of an Extend primer of the invention which was used to genotype single nucleotide polymorphisms within human glycoprotein VI (platelet) (GP6; GPIV;GPVI) DNA which is located at chromosomal position 19q13.4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying a subject at risk of breast cancer by detecting the presence or absence of one or more nucleotide polymorphic variations, useful for diagnosing, preventing and/or treating breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           breast cancer; cytostatic; gene therapy; GPG; GPIV; GPVI; chromosome 19q13.4; ss;

Identifying a subject at risk of breast cancer by detecting the presence of polymorphic variations in the DLG1, KIAAO783, DPF3 or CENPC1 regions which are associated with breast cancer in a nucleic acid sample from a subject.

The present invention relates to a method for identifying a subject at crisk of breast cancer. The method comprising detecting the presence or comprise of one or more polymorphic variations associated with breast cache acid acid sample from a subject. The nucleic acid sample comprises the DLG1 region (AD079402), KIAA0783 region (AD079403), DPF3 cregion (AD079404) or CENPC1 region (AD079405). The gene DLG1 (discs, region (AD079404) or CENPC1 region (AD079405). The gene bLG1 (discs, region (AD079405) are subject to the gene bLG1 (discs, person, hold or sample composed to chromosomal position 329. The gene KIAA0783 is also known as synapse-associated protein of the gene kIAA0783 is also known as phF14 and pHD finger protein 14. KIAA0783 composed to chromosomal position 7p21.3. The KIAA0783 protein is a novel gene with unknown function, however, being a zinc finger protein, it likely to be a transcription factor. The gene DPF3 (D4, zinc and composed phD fingers, family 3) is also known as CERD4, cer-d4, FLJ14079 and 2810403B03Rik. DPF3 is a Rho family guanine-nucleotide exchange factor. DPF3 has been mapped to chromosomal position 14q24.3-q31.1. The capped composed protein (2) is also known as Centromere composed to chromosomal position 4q12-q13.3. CENPC1 has been mapped to chromosomal position 4q12-q13.3. CENPC1 is a centromere autoantigen and a component of the inner chinetochore size and a timely transition to anaphase. The method is useful for identifying a subject at tisk of breast cancer, to analyze and composed to a breast cancer treatment, and in clinical drug trials. The present sequence was used in an example from the invention.

Thought to be cytostatic, antibacterial, immunosuppressive and antiinflammatory. It is useful for treating a condition in a patient requiring removal or destruction of cells, for treating a condition such as benign or malignant tumor, inflammatory disease, autoimmune disease and infectious disease. The peptide useful for treatment is derived from the amino acid sequence for a pancreatic thread protein. The peptide is conjugated, linked or bound to a molecule chosen from antibody or its fragment, antibody-like binding molecule, where the molecule has a higher affinity for binding to a tumor or other target than binding to other cells. Treatment using NTP peptides can remove benign tumors with less risk and fewer of the undesirable side effects of surgery. The present sequence is an NTP encoding sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel neural thread protein peptide, referred as cell death peptide, useful for treating prostatic hyperplasia, psoriasis, eczema, dermatosis, atherosclerosis, cosmetic modification to skin, throat, mouth, muscle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        19-JUL-2001; 2001US-0306150P

Thought to be cytostatic, antibacterial, immunosuppressive and antiinflammatory. It is useful for treating a condition in a patient requiring removal or destruction of cells, for treating a condition such as benign or malignant tumor, inflammatory disease, autoimmune disease and infectious disease. The peptide useful for treatment is derived from the amino acid sequence for a pancreatic thread protein. The peptide is conjugated, linked or bound to a molecule chosen from antibody or its fragment, antibody-like binding molecule, where the molecule has a higher affinity for binding to a tumor or other target than binding to other cells. Treatment using NTP peptides can remove benign tumors with less risk and fewer of the undesirable side effects of surgery. The present sequence is an NTP encoding sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         19-JUL-2001;

The c-myb sequence was screened for optimal ribozyme target sites using a computer folding algorithm, and regions of the mRNA which did not form secondary folding structures and contained potential ribozyme cleavage sites were identified. Ribozymes were synthesised and their activities optimised by either varying the length of the binding arms or by modification to prevent degradation by nucleases. The ribozymes the c-myb sequence and can be used to prevent smooth muscle cell hyperproliferation in restenosis, especially after coronary angioplasty,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents the preferred target sequence for enzymatic nucleic acid, especially a hammerhead ribozyme, which

Predisposition to juvenile glaucoma is detected by characterising the following microsatellite markers on chromosome 1q21q31 associated with occurrence of juvenile glaucoma: afm359yh1, afm22x33, ngal; afm21; afm248wg5; afm278ye5; afm21xb10; afm157xe7 and NGA5. An oligonucleotide primer of the present sequence was used with a primer having the sequence given in AAT43036 to amplify the afm278ye5 marker. Apart from detecting predisposition to disease, the microsatellites should allow localisation, and thus isolation, of the gene involved in juvenile glaucoma
Sequence 17 BP; 4 A; 4 C; 6 G; 3 T; 0 U; 0 Other;

Indirect genotypic diagnosis of CADASIL - uses markers genetically linked (within a 2 cM interval) to the mutated gene.

WPI; 1997-322151/30.

Page 5 13pp; English

CC CADASIL (cerebral autosomal dominant arteriopathy with subcortical CC INTACT (cerebral autosomal dominant arteriopathy with subcortical CC infarcts and leukoencephalopathy) for symptomatic or at risk individuals CC or foetuses belonging to a family suspected or known to be affected by CC CADASIL. The method involves the use of markers genetically linked to the mutated gene responsible for CADASIL in order to detect whether or not the tested individual is carrying the chromosome 19 marker alleles that CC have been linked to the disease gene in this given family and to estimate CC his carrier risk, characterised in that the method is based on the CC localisation of the gene in the interval of 2 CM spanned by the flanking CC markers D19S226 and D19S19 and in that one uses at least 2 markers CC located each on one side of the gene. The present sequence represents a CC flanking nucleotide sequence of a new D19S841 marker. The method is used CC Two new microsatellites D19S841 and 11547 have been identified and mapped d by

These very highly polymorphic markers are located very close to the gene within this interval. Their use in the diagnostic method according to the invention will further increase irraccuracy and safety
                                                                                          The present invention describes nucleic acid molecules which modulate th synthesis, expression and/or stability of a mRNA encoding 1 or more receptors of vascular endothelial growth factor (VEGF). A patient (preferably human) having a condition associated with the level of the fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be treated by administering the nucleic acid molecule or the expression vector to the patient. AAK67275 to AAX75752 represent specific examples
                                                                                                                                                                                                                                                             Nucleic acid molecule modulating VEGF receptor(s) gene expression or stability - useful for treating e.g. tumour angiogenesis, psoriasis, rheumatoid arthritis, etc., in a human patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Vascular endothelial growth factor receptor; VEGF receptor; flt-1; fl KDR; hammerhead ribozyme; hairpin ribozyme; cleavage; tumour angiogenesis; psoriasis; rheumatoid arthritis; ocular disease; fms-like tyrosine kinase 1; kinase insert domain containing receptor;

                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes nucleic acid molecules which modulate the synthesis, expression and/or stability of a mRNA encoding 1 or more receptors of vascular endothelial growth factor (NGGP). A patient (preferably human) having a condition associated with the level of the fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can liverated by administering the nucleic acid molecule or the expression vector to the patient. AAX67275 to AAX75752 represent specific examples of nucleic acid molecules from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             fms-like
                                                                                                                                                                                                                                                                                                                                             Sequence 17 BP; 1 A; 2 C; 2 G; 0 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acid molecule modulating VEGF receptor(s) gene expression or stability - useful for treating e.g. tumour angiogenesis, psoriasis, rheumatoid arthritis, etc., in a human patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human flt1 VEGF receptor hammerhead ribozyme substrate #1370

                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes nucleic acid molecules which modulate the synthesis, expression and/or stability of a mRNA encoding 1 or more receptors of vascular endothelial growth factor (VEGF). A patient (preferably human) having a condition associated with the level of the fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour angiogenesis, ocular diseases, pooriasis and rheumatoid arthritis) can be treated by administering the nucleic acid molecule or the expression vector to the patient. AAX67275 to AAX75752 represent specific examples
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acid molecule modulating VEGF receptor(s) gene expression or stability - useful for treating e.g. tumour angiogenesis, psoriasis, rheumatoid arthritis, etc., in a human patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      KDR; hammerhead ribozyme; hairpin ribozyme; cleavage; tumour angiogenesis; psoriasis; rheumatoid arthritis; ocular disease; fms-like tyrosine kinase 1; kinase insert domain containing receptor;

(I) can be used to modulate expression of preferably Delta-9 desaturase or a granule bound starch synthase (GBSS) gene, in a plant (preferably a maize or canola plant). (I) can be used to modulate caffeine synthesis in a coffee plant, nicotine production in a tobacco plant, fruit ripening processes in an apple, tomato, pear, plum or peach plant, flower pigmentation in a rose, petunia, chrysanthemum or marigold plant or lignin production in a tobacco, aspen, poplar or pine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Zwick

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes an enzymatic nucleic acid molecule (I) with RNA cleaving activity, which modulates the expression of a plant gene. Also described is a gene comprising a cDNA sequence encoding maize Delta-9 desaturase. (I) can be used to modulate expression of a gene,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              maize or canola.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0
```

Ribozyme which modulates plant gene expression of DELTA-9 desaturase or maize or canola.

expression - p

preferably modulates und starch synthase in

and mutations

Also described is a gene comprising a cDNA sequence encoding maize Delta-9 desaturase. (I) can be used to modulate expression of a gene, preferably Delta-9 desaturase or a granule bound starch synthase (GBSS) gene, in a plant (preferably a maize or canola plant). (I) can be used to modulate caffeine synthesis in a coffee plant, nicotine production in a tobacco plant, fruit ripening processes in an apple, tomato, pear, plum or peach plant, flower pigmentation in a rose, petunia, chrysanthemum or marigold plant or lignin production in a tobacco, aspen, poplar or pine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       plant
                           ribozymes, respectively, which specifically cleave human c-fos. AAV95261 to AAV95400 and AAV95585 to AAV95628 represent human c-fos target sequences. The enzymatic nucleic acid molecules can be used for treating cancer associated with elevated levels of c-fos oncogene, especially leukaemias, neuroblastomas and lung, breast and colon cancers. The ribozymes may also be used as diagnostic tools to examine genetic drift and mutations within diseased cells, or to detect the presence of c-fos
                                                                                                                                                                                                                               The present invention describes an enzymatic nucleic acid molecule which specifically cleaves RNA derived from a c-fos gene. AAV95401 to AAV95540 and AAV95541 to AAV95584 represent hammerhead ribozymes and hairping.
                                                                                                                                                                                                                                                                                                                                                                                                         Enzymatic nucleic acid molecules which specifically cleave RNA derived from a c-fos gene - useful for treating conditions related to levels of fos, especially cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      diseased cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; c-fos; hammerhead ribozyme; hairpin ribozyme; target site; cancer; oncogene; leukaemia; neuroblastoma; diagnosis; genetic drift; mutation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 1998-427942/36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 23-JAN-1997;

                                                                                                            Matches
                                                                                                                                                                                                                                                             The present invention describes enzymatic nucleic acid molecules (NAMs) which specifically cleave RNA derived from an epidermal growth factor receptor (EGF-R) gene. AAV97221 to AAV98043 and AAV98097 to AAV99090 represent specifically claimed target sequence from human EGF-R. AAV98067 to V9878 represent hammerhead ribozymes and hairpin ribozymes respectively for human EGF-R. The NAMs are useful for cleaving EGF-R RNA in the treatment of a condition associated with EGFR expression levels e.g. to inhibit cell proliferation in the prevention or treatment of cancers. The NAMs can also be used as diagnostic tools to examine genetic drift and mutations within diseased cells or to detect the presence of EGF-R RNA in a cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 17

                                                                                                                            ErbB-2 gene. Of these, only oligonucleotides AAV48799-91 resulted in CC significant redcution in ErbB-2 protein expression, while colligonucleotides AAV48792-886 had little effect. The oligonucleotides exemplify the invention. The specification describes oligonucleotides chart contain 8-30 nucleotides, which contain at most 8 nucleotides that contain three hydrogen bonds to cytosine; do not contain four consecutive nucleotides able to form three H-bonds each to four consecutive cytosines; do not contain two sequences of three consecutive cytosines, and the ratio between residues able to form two H-bonds each consecutive cytosines, and the ratio between residues able to form two H-bonds each consecutive collgonucleotides are used to modulate expression of genes, particularly che genes for p53, ErB-2, junB, junD, TGF-beta 1 or beta 2 to control colligonucleotides can also be used to analyse function of proteins (by caltering their expression or activity) and therapeutically, e.g. in cases cof cancer or (targeting TGF) for stimulating the immune system

```
CC cleaving activity, which specifically cleave RNA encoded by an aryl cc leaving activity, which specifically cleave RNA encoded by an aryl comparison nuclear transporter (ARNT) gene, an integrin subunit beta 3 cc gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, cc and AAA17168 to AAA17560 and AAA17623 to AAA17684 represent their cc corresponding target sequences; AAA17685 to AAA18385 and AAA19086 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18986 to AAA19086 and AAA19155 to AAA19222 represent their corresponding target sequences; CC AAA19223 to AAA20361 and AAA21501 to AAA21595 represent ribozyme sequences; CC AAA21689 to AAA21681 and AAA22161 to AAA21595 represent their corresponding target sequences; CC AAA21689 to AAA21681 represent their corresponding target sequences; CC AAA21689 to AAA22475 and AAA23342 represent their corresponding target sequences; CC AAA21682 represent their corresponding target sequences; CC CAA22422 represent their corresponding target sequences. The ribozyme sequence cc for integrin subunit beta 3, and AAA22476 to AAA23422. AAA23343 to AAA3342 represent of their corresponding target sequences. The ribozymes of corresponding target sequences. The ribozyme 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               integrin alpha 6 subunit; integrin subunit beta 3; hairpin ribozyme; hammerhead ribozyme; angiogenic factor; cytostatic; antidiabetic; ophthalmologic; antiinflammatory; antiarthritic; antipsoriatic; ARMD; dermatological; RNA cleavage; cancer; diabetic retinopathy; arthritis; age related macular degeneration; inflammation; neovascular glaucoma; myopic degeneration; psoriasis; verruca vulgaris; angiofibroma; tuberous sclerosis; pot-wine stain; Sturge Weber syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel ribozymes for modulating the synthesis, of an mRNA encoding an angiogenic factors.

                                                                                                                                                                                                                                                                                                                        The present invention describes enzymatic nucleic acid molecules with RNA cleaving activity, which specifically cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16755 to AAA17561 to AAA17622 represent ribozyme sequences for ARNT, and AAA17168 to AAA17663 to AAA18385 and AAA19887 to Corresponding target sequences; AAA17685 to AAA18385 and AAA19887 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19987 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 and AAA19155 to AAA19222 represent their corresponding target sequences; AAA19154 represent ribozyme sequences for integrin alpha 6 subunit, and AAA2352 represent ribozyme sequences aAA21595 to AAA23168 represent their corresponding target sequences; AAA21595 to AAA23168 represent their corresponding target sequences; AAA21689 to AAA22168 represent their corresponding target sequences; AAA21689 to AAA22168 represent their corresponding target sequences; AAA21689 to AAA22168 represent their corresponding target sequences for integrin subunit beta 3, and AAA22476 to AAA23342 represent ribozyme sequence for integrin subunit beta 3, and AAA22476 to AAA23622, AAA23343 to AAA23422 represent their corresponding target sequences. The ribozymes of the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT, corresponding target sequences. The ribozymes of the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially arms, sequence especially arms, integrin subunit alpha-6, or Tie-2. They are especially arms, integrin subunit alpha-6, or Tie-2. They are especially arms, sequence for integrin subunit alpha-6, or Tie-2. They are especially arms, sequence for angiofilirate forms, sequence for angiofilirate forms, sequence for angiofilirate forms, sequence for angiofilirate form
                                                                                                                              Query Match

The present invention describes enzymatic nucleic acid molecules with RNA cleaving activity, which specifically celeave RNA encoded by an aryl CC hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 CC gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to AAA17767 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, CC and AAA17168 to AAA17560 and AAA17623 to AAA17684 represent their CC corresponding target sequences, AAA17685 to AAA18385 and AAA19087 to CC AAA19154 represent ribozyme sequences for Tie-2, and AAA19087 to CC AAA19155 to AAA1222 represent their corresponding target sequences; AAA17685 to AAA19385 and AAA19087 to CC AAA19233 to AAA21361 and AAA21501 to AAA21595 represent ribozyme gequences for integrin alpha 6 subunit, and AAA20362 to AAA21500 and CC AAA21595 to AAA21688 represent their corresponding target sequences; CC AAA21689 to AAA21688 represent their corresponding target sequences; CC AAA21689 to AAA21675 and AAA23263 to AAA23172 represent ribozyme sequence for integrin subunit beta 3, and AAA22476 to AAA23362 represent ribozymes of the invention are used for modulating the synthesis, expression and/or CC AAA21689 to AAA22475 and AAA23263 to AAA23422 represent ribozymes of the invention are used for modulating the synthesis, expression and/or CC integrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are CC especially used to treat cancer, diabetic retinopathy, age related CC macular degeneration (ARMD), inflammation, and arthritis, as well as neovascular glaucoma, myopic degeneration, psoriasis, verruca vulgaris, and other syndrome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-Rendu syndrome, CC integrin subunit alpha-6, or integrin subunit bera-3 conductors of AANT, Tie-2, integrin su
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAA22688
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              integrin alpha 6 subunit; integrin subunit beta 3; hairpin ribozyme; hammerhead ribozyme; angiogenic factor; cytostatic; antidiabetic; ophthalmologic; antiinflammatory; antiarthritic; antipsoriatic; ARMD; dermatological; RNA cleavage; cancer; diabetic retinopathy; arthritis; age related macular degeneration; inflammation; neovascular glaucoma; myopic degeneration; psoriasis; verruca vulgaris; angiofibroma; tuberous sclerosis; pot-wine stain; Sturge Weber syndrome; Kippel-Trenaunay-Weber syndrome; Osler-Weber-Rendu syndrome; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel ribozymes for modulating the synthesis, expression and/or stability of an mRNA encoding an angiogenic factors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    19-JUN-2000

ribozymes for modulating the synthesis, an angiogenic factors. expression and/or stability

English.

CC cleaving activity, which specifically cleave RNA encoded by an aryl compared to the control of the control o The present invention describes enzymatic nucleic acid molecules with RNP syndrome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-Rendu syndrome, and other syndromes and diseases related to the levels of ARNT, Tie-2, subunit alpha-6,

Novel ribozymes for modulating the synthesis, of an mRNA encoding an angiogenic factors. expression and/or stability

Claim 54; Page 244; 305pp; English.

Crieaving activity, which specifically cleave RNA encoded by an aryl Crieaving activity, which specifically cleave RNA encoded by an aryl Crieaving activity, which specifically cleave RNA encoded by an aryl Crieaving activity, which specifically cleave RNA encoded by an aryl Crieaving activity, which specifically cleave RNA encoded by an aryl Crieaving activity, which specifically cleave RNA encoded by an aryl Crieaving activity, which specifically cleave RNA encoded by an aryl Crieaving activity, which specific all cleaves RNA encoded by an aryl Crieaving activity, and activity and activity and activity and activity and activity and activities activities and activities and activities and activities activities and activities activities and activities activities and activities as well as especially used to treat cancer, diabetic retinopathy, age related consequence of tuberous cleared account of tuberous schemes, processed and activities as well as especially consequences of tuberous schemes, and archarities, as well as especially consequences of tuberous schemes, and archarities, as well as especially consequences and activities as well as especially consequences and activities as well as especially consequences and activities as well as especially consequences, and activities as well as especially consequences and activities as well as an activities as activities and activities as well as an activities as active active activities and activities as well as an activities and activities a

                                                                The present invention describes enzymatic nucleic acid molecules with RNA cleaving activity, which specifically cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNI) gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA1675 to AAA1767 and AAA1766 to AAA1762 represent ribozyme sequences for ARNT, and AAA17168 to AAA17661 to AAA17623 represent tribozyme sequences for ARNT, and AAA17168 to AAA1768 and AAA1768 to AAA18385 and AAA19087 to AAA1914 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 and AAA19155 to AAA19222 represent their corresponding target sequences; AAA19223 to AAA20361 and AAA21501 to AAA21595 represent ribozyme sequences for Tie-20 and AAA1923 to AAA2168 represent ribozyme sequences; AAA19232 to AAA2168 represent ribozyme sequences; AAA19233 to AAA2168 represent ribozyme sequences; AAA12169 to AAA2168 represent riboryme sequences; AAA2169 to AAA2168 represent ribozyme sequences; AAA2169 to AAA2168 represent riboryme sequence for integrin subunit beta 3, and AAA22476 to AAA2362, AAA3343 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and other syndromes and diseases related to the levels of ARNT, Tie-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           integrin alpha 6 subunit; integrin subunit beta 3; hairpin ribozyme; hammerhead ribozyme; angiogenic factor; cytostatic; antidiabetic; ophthalmologic; antiinflammatory; antiarthritic; antipsoriatic; ARMD; dermatological; RNA cleavage; cancer; dlabetic retinopathy; arthritis; age related macular degeneration; inflammation; neovascular glaucoma;

cleaving activity, which specifically cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, and AAA17168 to AAA17560 and AAA17623 to AAA17684 represent their corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 and AAA19155 to AAA19222 represent their corresponding target sequences; AAA19223 to AAA20361 and AAA21591 to AAA21595 represent ribozyme sequences for integrin alpha 6 subunit, and AAA21362 to AAA21508 and AAA21303 to AAA21303 and AAA21303 to AAA21688 represent their corresponding target sequences; AAA19268 to AAA21475 and AAA21303 to AAA21303 and AAA21304 represent ribozyme sequences for integrin alpha 6 subunit, and AAA21362 to AAA21504 to AAA21475 and AAA21303 to AAA21304 represent ribozyme sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; aryl hydrocarbon nuclear transport; ARNT; TIE-2; angiogenesis; integrin alpha 6 subunit; integrin subunit beta 3; hairpin ribozyme; hammerhead ribozyme; angiogenic factor; cytostatic; antidiabetic; ophthalmologic; antiinflammatory; antiarthritic; antipsoriatic; ARND; dermatological; RNA cleavage; cancer; diabetic retinopathy; arthritis; age related macular degeneration; inflammation; neovascular glaucoma; myopic degeneration; psoriasis; verruca vulgaris; angiofibroma; tuberous sclerosis; pot-wine stain; Sturge Weber syndrome; ss.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        for integrin subunit beta 3, and AAA22476 to AAA23422, ATTALLED AAA23422 represent their corresponding target sequences. The ribozymes of the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, diabetic retinopathy, age related macular degeneration (ARMD), inflammation, and arthritis, as well as neovascular glaucoma, myopic degeneration, psoriasis, vertuca vulgaris, angiofibroma of tuberous sclerosis, pot-wine stains, Sturge Weber syndrome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-Rendu syndrome, and other syndromes and diseases related to the levels of ARNT, Tie-2, integrin subunit alpha-6, or integrin subunit beta-3
                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; aryl hydrocarbon nuclear transport; ARNT; TIE-2; angiogenesis; integrin alpha 6 subunit; integrin subunit beta 3; hairpin ribozyme; hammerhead ribozyme; angiogenic factor; cytostatic; antidiabetic; ophthalmologic; antiinflammatory; antiarthritic; antipsoriatic; ARND; dermatological; RNA cleavage; cancer; diabetic retinopathy; arthritis; age related macular degeneration; inflammation; neovascular glaucoma; myopic degeneration; psoriasis; verruca vulgaris; angiotibroma; tuberous sclerosis; pot-wine stain; Sturge Weber syndrome; 85.

Kippel-Trenaunay-Weber syndrome; Osler-Weber-Rendu syndrome; 85.

```

The present invention describes enzymatic nucleic acid molecules with RNA cleaving activity, which specifically cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to AAA17167 and AAA17661 to AAA17622 represent ribozyme sequences for ARNT, and AAA1768 to AAA17623 to AAA17644 represent their corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086

The present cleaving act hydrocarbon

invention describes enzymatic nucleic acid molecules with RNA tivity, which specifically cleave RNA encoded by an aryl nuclear transporter (ARNT) gene, an integrin subunit beta 3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC and AAA19155 to AAA19222 represent their corresponding target sequences; CC AAA19223 to AAA20361 and AAA21501 to AAA21595 represent ribozyme CC sequences for integrin alpha 6 subunit, and AAA20362 to AAA21500 and CC AAA21596 to AAA21688 represent their corresponding target sequences; CC AAA21689 to AAA2475 and AAA2363 to AAA23342 represent ribozyme sequence CC AAA21689 to AAA22475 and AAA2363 to AAA23342 represent ribozyme sequence CC AAA2162 represent their corresponding target sequences. The ribozymes of CC AAA23422 represent their corresponding target sequences. The ribozymes of CC the invention are used for modulating the synthesis, expression and/or CC integrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are CC especially used to treat cancer, diabetic retinopathy, age related CC macular degeneration (ARMD), inflammation, and arthritis, as well as CC encyascular glaucoma, myopic degeneration, psoriasis, verruca vulgaris, CC englofibroma of tuberous sclerosis, pot-wine stains, Sturge Weber CC syndrome, Kipgel-Trenaunay-Weber syndrome, Osler-Weber-Rendu syndrome, CC and other syndromes and diseases related to the levels of ARNT, Tie-2, integrin subunit alpha-6, or integrin subunit beta-3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

```
CC gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to CC AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, CC and AAA17168 to AAA17560 and AAA17623 to AAA17684 represent their CC corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to CC AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 CC AAA19123 to AAA19222 represent their corresponding target sequences; CC AAA19223 to AAA20361 and AAA21501 to AAA21555 represent ribozyme cC sequences for integrin alpha 6 subunit, and AAA20362 to AAA21500 and CAAA21598 to AAA21688 represent their corresponding target sequences; CC AAA121689 to AAA22168 represent their corresponding target sequence CC for integrin subunit beta 3, and AAA2376 to AAA23362, AAA23343 to CAAA23422 represent their corresponding target sequences. The ribozymes of the invention are used for modulating the synthesis, expression and/or CC stability of an mRNA encoding angiogenic factor, especially ARNT, CC integrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are cespecially used to treat cancer, diabetic retinopathy, age related CC macular degeneration (ARMD), inflammation, and arthritis, as well as correspondent forcome, Kippel-Trenaunay-Weber syndrome, Sturge Weber cC syndrome, Kippel-Trenaunay-Weber syndrome, Soler-Weber-Rendu syndrome, CC and other syndromes and diseases related to the levels of ARNT, Tie-2, integrin subunit beta-3
Novel ribozymes for modulating the synthesis, expression and/or stability of an mRNA encoding an angiogenic factors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; aryl hydrocarbon nuclear transport; ARNT; TIE-2; angiogenesis; integrin alpha 6 subunit; integrin subunit beta 3; hairpin ribozyme; hammerhead ribozyme; angiogenic factor; cytostatic; antidiabetic; ophthalmologic; antiinflammatory; antiarthritic; antipsoriatic; ARND; dermatological; RNA cleavage; cancer; diabetic retinopathy; arthritis; age related macular degeneration; inflammaton; neovascular glaucoma; myopic degeneration; portiasis; verruca vulgaris; angiofibroma; tuberous sclerosis; pot wine stain; Sturge Weber syndrome; Kippel-Trenaunay-Weber syndrome; Osler-Weber, Rendu syndrome; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 17 BP; 7 A; 5 C; 0 G; 0 T; 5 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes enzymatic nucleic acid molecules with RNA Cleaving activity, which specifically cleave RNA encoded by an aryl CC hydrocarbon nuclear transporter (ARNT) gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to CAAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, CC and AAA17168 to AAA17560 and AAA17623 to AAA17684 represent their CC corresponding target sequences; AAA17685 to AAA1385 and AAA19087 to CC AAA19154 represent ribozyme sequences for Tie-2, and AAA19087 to CC and AAA19155 to AAA21922 represent their corresponding target sequences; AAA17685 to AAA1385 and AAA19086 to AAA19122 represent their corresponding target sequences; CC AAA19232 to AAA21681 and AAA21591 to AAA2195 represent ribozyme corresponding target sequences; CC AAA1889 to AAA21688 represent their corresponding target sequences; CC AAA21889 to AAA22475 and AAA21864 to AAA23242 represent ribozyme corresponding target sequences; CC AAA21889 to AAA22475 and AAA23262 to AAA23242 represent ribozyme sequence for integrin subunit beta 3, and AAA22476 to AAA23262, AAA23343 to CAA23342 represent their corresponding target sequences. The ribozyme of the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT, CC integrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are ceptually used to treat cancer, diabetic retinopathy, age related CC macular degeneration (ARMD), inflammation, and arthritis, as well as neovascular glaucoma, myopic degeneration, psorlasis, verruca vulgaris, and other syndrome, and diseases related to the levels of ARNT, Tie-2, integrin subunit beta-3 critegrin subun
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 2375

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 2376
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 corresponding target sequences; AAA1385 to AAA18385 and AAA1987 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19087 to and AAA19155 to AAA19222 represent their corresponding target sequences; AAA19223 to AAA20361 and AAA21501 to AAA21555 to AAA21561 and AAA21505 represent ribozyme sequences for integrin alpha 6 subunit, and AAA20362 to AAA21500 and AAA21596 to AAA21688 represent their corresponding target sequences; AAA21689 to AAA22168 and AAA2363 to AAA2347 represent ribozyme sequence for integrin subunit beta 3, and AAA23476 to AAA23362, AAA23343 to AAA23422 represent their corresponding target sequences. The ribozyme of the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT, integrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, diabetic retinopathy, age related commodular glaucoma, myopic degeneration, sontiasis, verruca vulgaris, angiofibroma of tuberous sclerosis, pot-wine stains, Sturge Weber syndrome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-Rendu syndrome, and other syndromes and diseases related to the levels of ARNT, Tie-2,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

The present invention describes enzymatic nucleic acid molecules with RNA CC cleaving activity, which specifically cleave RNA encoded by an aryl CC hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 CC gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to AAA17561 to AAA17622 represent ribozyme sequences for ARNT, CC AAA17168 to AAA17561 to AAA17622 represent their corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to CC corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to AAA19154 represent ribozyme sequences for Tie-2, and AAA19087 to CC AAA19232 to AAA21921 and AAA21501 to AAA21855 represent ribozyme sequences; CC AAA19232 to AAA21868 represent their corresponding target sequences; CC AAA12892 to AAA22168 and AAA21501 to AAA21595 represent ribozyme and CC AAA21896 to AAA21868 represent their corresponding target sequences; CC AAA21869 to AAA22468 represent their corresponding target sequences; CC AAA21869 to AAA22475 and AAA23263 to AAA23323 represent ribozymes of the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT, CC integrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are specially used to treat cancer, diabetic retinopathy, age related corresponding target requences. The ribozymes of meovascular glaucoma, myopic degeneration, psoriasis, verruca vulgaris, supulcome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-Rendu syndrome, and other syndromes and diseases related to the levels of ARNT, Tie-2, integrin subunit beta-3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel ribozymes for modulating the synthesis, of an mRNA encoding an angiogenic factors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pavco

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAA21586 to AAA21688 represent their corresponding target sequences; AAA21589 to AAA22475 and AAA2363 to AAA2342 represent ribozyme sequence for integrin subunit beta 3, and AAA22476 to AAA23262, AAA23343 to AAA23422 represent their corresponding target sequences. The ribozymes of the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, diabetic retinopathy, age related macular degeneration (ARMD), inflammation, and arthritis, as well as neovascular glaucoma, myopic degeneration, psoriasis, verruca vulgaris, angiofibroma of tuberous selerosis, pot-wine stains, Sturge Waber syndrome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-Rendu syndrome, and other syndromes and diseases related to the levels of ARNT, Tie-2, and other syndromes and diseases related to the levels of ARNT, Tie-2, and other syndromes and diseases related to the levels of ARNT, Tie-2, and other syndromes and diseases related to the levels of ARNT, Tie-2, and other syndromes and diseases related to the levels of ARNT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, and AAA17168 to AAA17563 and AAA17623 to AAA17684 represent their corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18385 to AAA19086 and AAA19155 to AAA19222 represent their corresponding target sequences; AAA19223 to AAA192361 and AAA21501 to AAA21595 represent ribozyme sequences for Tie-2 to AAA21500 and AAA19223 to AAA20361 and AAA21501 to AAA21595 represent ribozyme sequences for Tie-2 to AAA21500 and AAA21501 to AAA21500 and AAA21501 to AAA21500 and AAA21500 and AAA21501 to AAA21500 and AAA21500 and AAA21501 to AAA21500 and AAA21500 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             07-OCT-1999

The present invention describes enzymatic nucleic acid molecules with RNA CC cleaving activity, which specifically cleave RNA encoded by an aryl CC hydrocarbon nuclear transporter (ARNT) gene, an integrin albha 6 subunit gene, or a Tie-2 gene. AAA16775 to CC AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, CC and AAA17168 to AAA17560 and AAA17625 to AAA17684 represent their CC corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to AAA19154 represent ribozyme sequences for Tie-2, and AAA19386 to AAA19156 co AAA19155 to AAA1222 represent their corresponding target sequences; AAA17685 to AAA18385 and AAA19086 co AAA19155 to AAA21361 and AAA21501 to AAA21555 represent ribozyme sequences; AAA17685 represent ribozyme sequences; AAA17685 to AAA21596 to AAA21596 and AAA21591 to AAA21595 represent ribozyme sequences; CC AAA19223 to AAA22163 and AAA21591 to AAA21595 represent ribozyme sequences; CC AAA21689 to AAA21688 represent their corresponding target sequences; CC AAA21689 to AAA22169 and AAA22363 to AAA23422 represent ribozyme sequence for integrin subunit beta 3, and AAA22476 to AAA23262, AAA23343 to AAA23422 represent their corresponding target sequences. The ribozyme soft the invention are used for modulating the synthesis, expression and/or corresponding target sequences. The ribozyme soft the invention are used for modulating the synthesis, expression and/or corresponding target sequences. They are consistent their corresponding target sequences. They are consistent to the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT, reactive sequences, diabetic retinopathy, age related consequences and consequences and arthritis, as well as consequences and other syndrome, observable to the levels of ARNT, Tie-2, integrin subunit alaba-6 or integrin subunit beta-3 or integrin subunit alaba-6 or integri
Sequence

AAA16775 to CC AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, Cc and AAA17168 to AAA17563 and AAA17625 to AAA1684 represent their corresponding target sequences; AAA17685 to AAA18935 and AAA19087 to CC AAA19147 represent ribozyme sequences for Tie-2, and AAA19087 to CC AAA19155 to AAA19122 represent their corresponding target sequences; CC AAA19223 to AAA21631 and AAA21501 to AAA21505 represent ribozyme sequences; CC AAA21895 to AAA2168 represent their corresponding target sequences; CC AAA21895 to AAA2168 represent their corresponding target sequences; CC AAA21895 to AAA2168 represent their corresponding target sequences; CC AAA21895 to AAA2168 represent their corresponding target sequences; CC AAA21895 to AAA22475 and AAA23263 to AAA2342 represent ribozyme sequence for integrin subunit beta 3, and AAA2342 represent ribozyme sequence corresponding target sequences. The ribozyme of the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT, CC especially used to treat cancer, diabetic retinopathy, age related correspondences are conceptable as well as meovascular glaucoma, myopic degeneration, pand arthritis, as well as meovascular glaucoma, myopic degeneration, septiasis, verruca vulgaris, and other syndrome, sclerosis, pot-wine stains, Sturge Weber correspondences and other syndrome, of integrin subunit alpha-6, or integrin subunit alpha-6, or integrin subunit beta-3
                                                                                                                                                                                                                                                                RESULT 2380
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The present invention describes enzymatic nucleic acid molecules with RNA cleaving activity, which specifically cleave RNA encoded by an aryl CC hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 cg gene, an integrin alpha 6 subunit gene, or a fie-2 gene. AAA16775 to AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, CC and AAA17168 to AAA17563 and AAA17625 to AAA17684 represent their corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to CC aAA19184 represent ribozyme sequences for Tie-2, and AAA19087 to CC aAA19125 to AAA19222 represent their corresponding target sequences; CC AAA19223 to AAA21561 and AAA21501 to AAA21562, and AAA19086 to AAA19223 to AAA21563 and AAA21501 to AAA21555 represent ribozyme sequences; CC AAA21856 to AAA21688 represent their corresponding target sequences; CC AAA21869 to AAA22475 and AAA21501 to AAA21352 represent ribozyme sequence for integrin subunit beta 3, and AAA22476 to AAA2362 represent ribozyme sequence for integrin subunit beta 3, and AAA22476 to AAA2362, AAA2343 to CC aAA23422 represent their corresponding target sequences for integrin subunit beta 3, and AAA22476 to AAA2362, AAA2343 to cc abability of an mRNA encoding angiogenic factor, especially ARNT, CC integrin subunit beta 3, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, diabetic retinopathy, age related CC macular degeneration (ARMD), inflammation, and arthritis, as well as movement of tuberous scherosis, pot-wine stains, Sturge Weber corresponding target sequences, cc and other syndromes and diseases related to the levels of ARNT, Tie-2, and other syndromes and diseases related to the levels of ARNT, Tie-2, integrin subunit alpha-6, or integrin subunit beta-3

mRNA ribozymes for encoding modulating the synthesis, an angiogenic expression and/or stability

Claim 54; Page 240; 305pp; English

Creaving activity, which specifically cheave may encoured by an atylocy hydrocarbon nuclear transporter (ARNT) gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to CC AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, CC and AAA17168 to AAA17560 and AAA17623 to AAA17684 represent their CC corresponding target sequences; AAA17635 to AAA18385 and AAA19087 to CC AAA19154 represent ribozyme sequences for Tie-2, and AAA19087 to CC AAA19155 to AAA19222 represent their corresponding target sequences; CC AAA19223 to AAA21361 and AAA21501 to AAA21555 represent ribozyme cc sequences for integrin alpha 6 subunit, and AAA20362 to AAA21500 and CC AAA21896 to AAA21688 represent their corresponding target sequences; CC AAA19223 to AAA22169 and AAA2363 to AAA2363 to AAA2362 represent ribozyme cc for integrin subunit beta 3, and AAA2376 to AAA23362, AAA23343 to CC AAA23422 represent their corresponding target sequences; CC AAA214589 to AAA22475 and AAA23263 to AAA23362, AAA23343 to CC atheiity of an mana encoding angiogenic factor, especially ARNT, CC integrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are cepically used to treat cancer, diabetic retinopathy, age related CC macular degeneration (ARMD), inflammation, and arthritis, as well as considered to the subcrome sclerosis, pot-wine stains, Sturge Weber CC and other syndromes and diseases related to the levels of ARNT, Tie-2, integrin subunit alpha-6, or integrin subunit beta-3 The present invention describes enzymatic nucleic acid molecules with cleaving activity, which specifically cleave RNA encoded by an aryl RN.

The present invention describes enzymatic nucleic acid molecules with RNA CC cleaving activity, which specifically cleave RNA encoded by an aryl CC hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 CC gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AMA16775 to CC AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT. CC corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to CC AAA19154 represent ribozyme sequences for Tie-2, and AAA19087 to CC aAA19154 represent ribozyme sequences for Tie-2, and AAA191886 to AAA19086 CC aAA19154 represent tribozyme sequences for Tie-2, and AAA191886 to AAA19086 CC aAA19154 represent adapta 6 subunit, and AAA20362 to AAA21500 and CC sequences for integrin alpha 6 subunit, and AAA20362 to AAA21500 and CC AAA21596 to AAA21688 represent their corresponding target sequences; CC CAA21689 to AAA22475 and AAA23363 to AAA2342 represent ribozyme sequence for integrin subunit beta 3, and AAA22476 to AAA23362 to AAA21500 cc CC for integrin subunit beta 3, and AAA22476 to AAA23262, AAA23343 to CC CAA23422 represent their corresponding target sequences. The ribozymes of the invention are used for modulating the synthesis, expression and/or content of th

myopic degeneration,

The present invention describes enzymatic nucleic acid molecules with RNA cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to CAAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, Cand AAA17168 to AAA17563 and AAA17683 to AAA17884 represent their Corresponding target sequences; AAA17685 to AAA18385 and AAA19887 to AAA19154 represent ribozyme sequences; AAA17685 to AAA18385 and AAA19887 to AAA19154 represent ribozyme sequences; AAA17685 to AAA18385 and AAA19887 to AAA1988 represent ribozyme sequences; AAA19154 represent ribozyme sequences; AAA19155 to AAA19222 represent their corresponding target sequences; AAA19225 to AAA21925 to AAA21925 to AAA21925 to AAA21936 to AAA21936 to AAA21936 and AAA23363 to AAA21936 to AAA23347 to AAA23475 and AAA23476 to AAA23472, AAA33343 to CAAA23472 represent their corresponding target sequence for integrin subunit beta 3, and AAA23476 to AAA23472, AAA33343 to AAA23472 represent their corresponding target sequence of AAA23422 represent their corresponding target sequence for integrin beta 3, and AAA23476 to AAA23472, AAA33434 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

```

A method has been developed for the identification of a nucleic acid capable of modulating a process in a biological system. The method comprises (a) introducing into the system a random library of nucleic acid catalysts (NAC) having a substrate binding domain (SBD), comprising

Nucleic acid molecules with endonuclease activity and catalytic activity, from the present invention, are used to modulate gene expression in plant and mammalian cells and to cleave target nucleic acid, particularly for treating systemic diseases caused by specific RNA, e.g. cancer, inflammation, psoriasis, non-hepatic ascites and infection. They may also be used to detect genetic drift and mutations in diseased cells and to determine c-raf RNA. Specifically NACs with RNA-cleaving activity that modulate expression of the Raf gene, are with RNA-cleaving activity that modulate expression of the Raf gene, are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               used to treat cancer, restenosis, psoriasis or rheumatoid arthritis, or generally any condition associated with the level of c-raf. Introduction of sugar/phosphate modifications increases stability against nuclease and activity. AAV90922 to AAV93877 represent NACs that can be used in the method, specifically for modulating the expression of a Raf gene
                                                   This sequence represents a primer of the invention. The invention relates to sequences of at least two nucleotides of formula: (X)m5'-(alpha)n-beta -N3'; or (X)m5'-(gamma)k-delta-N3'; where X = a labelled compound and/or a nucleotide with voluntary sequence; m = 0 or 1; alpha = thymine; n = natural number indicating the repetition of alpha; beta, delta = V or N; V = adenine, guanine or cytosine; N = adenine, guanine or thymine; pamma = thymine; k = natural number of 3 or over indicating the repetition of gamma, in which thymine expressed by gamma is composed of 1/3 or less of adenine, guanine and/or cytosine. The new nucleotides are useful as primers for RT-PCR and determination of base sequences. The new sequences allow for reproductive and highly efficient analysis of gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      JP11032765-A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RT-PCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            11-MAY-1999

RESULT 2388
                C. AAZ36739-41 represent oligo(dT) primers used for modified differential CC display, in the method of the invention. The specification describes a CC method for measuring the level of two or more nucleic acid molecules in a CC target. The method comprises contacting a probe with an arbitrarily or CC statistically sampled target and detecting a probe with an arbitrarily or CC enterentially expressed nucleic acid molecules associated with disease CC differentially expressed nucleic acid molecules associated with disease CC extensively the methods can be used to identify CC developmental disorder, proliferative disorder or neurological disorder. CC elementially the methods can be used to assess the efficacy or toxicity of or a resistance to a treatment. Also the methods can be used to determine differential expression of nucleic acid molecules in response to a stimulus, e.g. a chemical, drug or growth factor (especially CC epidermal growth factor), radiation, stress or a pathogen. The methods CC can also be used to determine co-regulated genes that can be potential CC can also be used to determine co-regulated genes that can be potential CC can also be used to determine co-regulated genes that can be potential CC can also be used to determine co-regulated genes that can be potential CC can also be used to determine co-regulated genes that can be potential CC can also be used to determine co-regulated genes that can be potential CC can be used to determine co-regulated genes that can be potential CC can also be used to determine co-regulated genes that can be potential CC can be used to determine co-regulated genes that can be potential CC can also be used to determine co-regulated genes that can be potential CC can be used to determine co-regulated genes that can be contacted to determine co-regulated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                               The present invention describes nucleic acids (A) that interact stably CC with a target sequence and contain at least one phosphoro(di)thioate CC link, having endonuclease activity. (A), and more generally any catalytic nucleic acid (A) that modulates expression of the oestrogen receptor CC gene, are used to treat cancer (particularly of breast or endometrium), CC in vivo or by transforming cells ex vivo and implanting treated cells, or CC gecause of the high selectivity for targeted RNA, (A) can also be used to correlate inhibition of gene expression with alterations in phenotype, CC particularly for identification of therapeutic targets, and as research CC reagents (for RNA, in the same way that restriction endonucleases are CC used with DNA). The combination of modifications in (A) improves CC resistance to nucleases, binding affinity and/or activity. AAA23503 to AAA24747 represent oestrogen receptor hammerhead ribozyme sequences, and CC AAA24748 to AAA25992 represent their corresponding target sequences. CC AAA25993 to AAA26107 to AAA26218 represent their corresponding target sequences. AAA26219 to AAA26218 represent other ribozyme sequences and CC antisense oligonucleotides used in the exemplification of the present CC invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 2389

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 2390
                                                                                        for other conditions associated with levels of osetrogen receptor.

Because of the high selectivity for targeted RNA, (A) can also be used to correlate inhibition of gene expression with alterations in phenotype, particularly for identification of therapeutic targets, and as research reagents (for RNA, in the same way that restriction endonucleases are used with DNA). The combination of modifications in (A) improves resistance to nucleases, binding affinity and/or activity. AAA23503 to AAA24747 represent osetrogen receptor hammerhead ribozyme sequences, and AAA24748 to AAA25092 represent their corresponding target sequences. and AAA26107 to AAAA2610 represent their corresponding target sequences. AAA26107 to AAAA2617 represent their corresponding target sequences and AAA26107 to AAAA2617 represent their corresponding target sequences and aAA26107 to AAAA2617 represent their corresponding target sequences and aAA26107 to AAAA2617 represent their corresponding target sequences and accordance of the present their corresponding target sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          with a target sequence and contain at least one phosphoro(di)thioate link, having endonuclease activity. (A), and more generally any catalytic nucleic acid (A') that modulates expression of the oestrogen receptor gene, are used to treat cancer (particularly of breast or endometrium), in vivo or by transforming cells ex vivo and implanting treated cells, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Thompson JD, Reynolds M,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (RIBO-) RIBOZYME PHARM INC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               20-APR-1998;
